Claims

What is claimed is:

5

15

- 1. A method for inhibiting platelet deposition in a patient in need thereof comprising administering a therapeutically effective amount of a nitric oxide adduct to the patient to inhibit platelet deposition; wherein the nitric oxide adduct is a nitrate which has at least one -O-NO₂ group selected from the group consisting of a polypeptide; an amino acid; a sugar; an oligonucleotide; a branched or unbranched, saturated or unsaturated aliphatic hydrocarbon; an aromatic hydrocarbon; or a heterocyclic compound.
- 2. The method of claim 1, wherein the nitrate which has at least one -O-NO₂ group is selected from the group consisting of a branched or unbranched, saturated or unsaturated aliphatic hydrocarbon; an aromatic hydrocarbon; or a heterocyclic compound.
 - 3. The method of claim 2, wherein the nitrate which has at least one -O-NO₂ group is nitroglycerin.
 - 4. The method of claim 2, wherein the nitrate which has at least one -O-NO₂ group is an angiotensin converting enzyme inhibitor.
 - 5. The method of claim 1, further comprising administering at least one antithrombogenic compound or a therapeutic agent.
- 20 6. The method of claim 5, wherein the anti-thrombogenic compound is heparin, hirudin, an analog of hirudin, warfarin, aspirin, indomethacin, dipyridamole, prostacyclin, prostaglandin-E, a sulfinpyrazone, a phenothiazine, a RGD peptide, a RDG peptide mimetic, an agent that blocks platelet glycoprotein IIb-IIIa receptors, ticlopidine or clopidogrel.
- 7. The method of claim 5, wherein the therapeutic agent is a monoclonal antibody, a fragment of recombinant human protein, a viral vector or an anti-sense molecule.
 - 8. A method for alleviating restenosis in a patient in need thereof comprising administering a therapeutically effective amount of a nitric oxide adduct to the patient to alleviate restenosis; wherein the nitric oxide adduct is a nitrate which has at least one -O-NO₂ group selected from the group consisting of a polypeptide; an amino acid; a

sugar; an oligonucleotide; a branched or unbranched, saturated or unsaturated aliphatic hydrocarbon; an aromatic hydrocarbon; or a heterocyclic compound.

- 9. The method of claim 8, wherein the nitrate which has at least one -O-NO₂ group is selected from the group consisting of a branched or unbranched, saturated or unsaturated aliphatic hydrocarbon; an aromatic hydrocarbon; or a heterocyclic compound.
- 10. The method of claim 9, wherein the nitrate which has at least one -O-NO₂ group is nitroglycerin.
- 11. The method of claim 9, wherein the nitrate which has at least one -O-NO₂ group is an angiotensin converting enzyme inhibitor.
 - 12. The method of claim 8, further comprising administering at least one antithrombogenic compound or a therapeutic agent.
 - 13. The method of claim 12, wherein the anti-thrombogenic compound is heparin, hirudin, an analog of hirudin, warfarin, aspirin, indomethacin, dipyridamole, prostacyclin, prostaglandin-E, a sulfinpyrazone, a phenothiazine, a RGD peptide, a RDG peptide mimetic, an agent that blocks platelet glycoprotein IIb-IIIa receptors, ticlopidine or clopidogrel.
 - 14. The method of claim 12, wherein the therapeutic agent is a monoclonal antibody, a fragment of recombinant human protein, a viral vector or an anti-sense molecule.
 - deposition or thrombus formation in a patient in need thereof comprising administering a therapeutically effective amount of a nitric oxide adduct to the patient to treat the vascular complication caused by platelet deposition or thrombus formation; wherein the vascular complication caused by platelet deposition or thrombus formation is myocardial infarction, thrombophlebitis, thrombocytopenia or bleeding disorder; wherein the nitric oxide adduct is a nitrate which has at least one -O-NO₂ group selected from the group consisting of a polypeptide; an amino acid; a sugar; an oligonucleotide; a branched or unbranched, saturated or unsaturated aliphatic hydrocarbon; an aromatic hydrocarbon; or a heterocyclic compound.

15

20

25

- 16. The method of claim 15, wherein the nitrate which has at least one -O-NO₂ group is selected from the group consisting of a branched or unbranched, saturated or unsaturated aliphatic hydrocarbon; an aromatic hydrocarbon; or a heterocyclic compound.
- 17. The method of claim 16, wherein the nitrate which has at least one -O-NO₂ group is nitroglycerin.
 - 18. The method of claim 16, wherein the nitrate which has at least one -O-NO₂ group is an angiotensin converting enzyme inhibitor.
- 19. The method of claim 15, further comprising administering at least oneanti-thrombogenic compound or a therapeutic agent.
 - 20. The method of claim 19, wherein the anti-thrombogenic compound is heparin, hirudin, an analog of hirudin, warfarin, aspirin, indomethacin, dipyridamole, prostacyclin, prostaglandin-E, a sulfinpyrazone, a phenothiazine, a RGD peptide, a RDG peptide mimetic, an agent that blocks platelet glycoprotein IIb-IIIa receptors, ticlopidine or clopidogrel.
 - 21. The method of claim 20, wherein the therapeutic agent is a monoclonal antibody, a fragment of recombinant human protein, a viral vector or an anti-sense molecule.
 - 22. A method for inhibiting platelet deposition, platelet adhesion or thrombus formation in a patient in need thereof comprising administering a therapeutically effective amount of a nitric oxide adduct to the patient to treat a myocardial infarction, thrombophlebitis, thrombocytopenia or a bleeding disorder caused by the platelet deposition, platelet adhesion or the thrombus formation; wherein the nitric oxide adduct is a nitrate which has at least one -O-NO₂ group selected from the group consisting of a polypeptide; an amino acid; a sugar; an oligonucleotide; a branched or unbranched, saturated or unsaturated aliphatic hydrocarbon; an aromatic hydrocarbon; or a heterocyclic compound.
 - 23. The method of claim 22, wherein the nitrate which has at least one -O-NO₂ group is selected from the group consisting of a branched or unbranched, saturated or unsaturated aliphatic hydrocarbon; an aromatic hydrocarbon; or a heterocyclic compound.

5

15

20

25

- 24. The method of claim 23, wherein the nitrate which has at least one -O-NO₂ group is nitroglycerin.
- 25. The method of claim 23, wherein the nitrate which has at least one -O-NO₂ group is an angiotensin converting enzyme inhibitor.
- 26. The method of claim 22, further comprising administering at least one anti-thrombogenic compound or a therapeutic agent.
 - 27. The method of claim 26, wherein the anti-thrombogenic compound is heparin, hirudin, an analog of hirudin, warfarin, aspirin, indomethacin, dipyridamole, prostacyclin, prostaglandin-E, a sulfinpyrazone, a phenothiazine, a RGD peptide, a RDG peptide mimetic, an agent that blocks platelet glycoprotein IIb-IIIa receptors, ticlopidine or clopidogrel.
 - 28. The method of claim 26, wherein the therapeutic agent is a monoclonal antibody, a fragment of recombinant human protein, a viral vector or an anti-sense molecule.
- 29. A method for treating a dysfunction in the endothelium of a patient comprising administering a therapeutically effective amount of a nitric oxide adduct to the patient wherein the nitric oxide adduct is a nitrate which has at least one -O-NO₂ group selected from the group consisting of a polypeptide; an amino acid; a sugar; an oligonucleotide; a branched or unbranched, saturated or unsaturated aliphatic hydrocarbon; an aromatic hydrocarbon; or a heterocyclic compound.
 - 30. The method of claim 29, wherein the nitrate which has at least one -O-NO₂ group is selected from the group consisting of a branched or unbranched, saturated or unsaturated aliphatic hydrocarbon; an aromatic hydrocarbon; or a heterocyclic compound.
- 25 31. The method of claim 30, wherein the nitrate which has at least one -O-NO₂ group is nitroglycerin.
 - 32. The method of claim 30, wherein the nitrate which has at least one -O-NO₂ group is an angiotensin converting enzyme inhibitor.
- 33. The method of claim 29, further comprising administering at least one anti-thrombogenic compound or a therapeutic agent.

5

- 34. The method of claim 33, wherein the anti-thrombogenic compound is heparin, hirudin, an analog of hirudin, warfarin, aspirin, indomethacin, dipyridamole, prostacyclin, prostaglandin-E, a sulfinpyrazone, a phenothiazine, a RGD peptide, a RDG peptide mimetic, an agent that blocks platelet glycoprotein IIb-IIIa receptors, ticlopidine or clopidogrel.
- 35. The method of claim 33, wherein the therapeutic agent is a monoclonal antibody, a fragment of recombinant human protein, a viral vector or an anti-sense molecule.
